

CONSUMER FEEDBACK ANALYSIS REPORT ON THE USE OF THE SUPER ORGASM STOP DIETARY SUPPLEMENT

Consumer opinion research enables a deeper understanding of user experiences with a product.

Examining consumer feedback and user satisfaction rates offers the manufacturer valuable insights into the product's perception among its intended audience.

The objective of the research carried out on the Super Orgasm Stop dietary supplement was to gather user feedback regarding their experiences with the product.

Super Orgasm Stop is a dietary supplement designed to address men's needs. This product features maca root, known for enhancing sexual performance and increasing sexual desire.

The research on the Super Orgasm Stop dietary supplement involved a sample of 70 participants who evaluated the product supplied by the manufacturer.

Study Scope

The study sought to collect respondents' views on their experiences with the Super Orgasm Stop dietary supplement. Participants were requested to evaluate their perceptions concerning:

- comprehensive sexual vitality
- quality of intimate experiences
- degree of control over the state of arousal
- length of erection
- general contentment with the utilization of the product

Aim of the research

The objective of the study was to comprehend the opinions of respondents concerning their personal experiences with the Super Orgasm Stop dietary supplement. The research concentrated on observations reported by users regarding:

- degree of sexual vitality
- quality of intimate experiences
- degree of control over the state of arousal
- general contentment with the utilization of the product

Research tool

The research was carried out anonymously. A survey questionnaire served as the instrument for the study.

The survey was published online on a platform designed for carrying out marketing research.

The survey link was distributed to participants who tested the Super Orgasm Stop dietary supplement after they had given their consent to take part in the study.

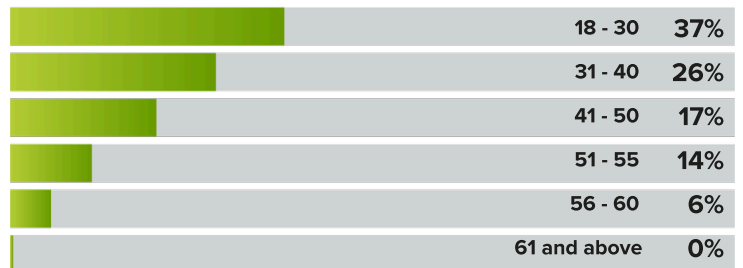

The questionnaire included closed questions that permitted the selection of one of the provided answers.
